DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claims 1-18, pertaining to a method including determining a time to breakdown for a dielectric layer based upon a number of pulses applied to a device;

Species 2, claims 19-36, pertaining to a method including measuring a current through the dielectric layer after one or more of the constant voltage pulses has been applied;

Species 3, claims 37-52, pertaining to method including measuring a current through the dielectric layer after each of the constant voltage pulses has been applied;

Species 4, claims 53-66, pertaining to a method including applying multiple pulses having a constant voltage that ranges from 4-5 volts and a constant pulse width that is less than 1 usec;

Species 5, claims 67-70, pertaining to a method including forming a plurality of devices and measuring the current through the dielectric layer and determining the time to breakdown;

Species 6, claims 71-73, pertaining to a method including forming a plurality of devices and applying a plurality of constant voltage pulses having a constant width;

Species 7, claims 74-76, pertaining to a method including forming a plurality of devices, applying a constant voltage that ranges from 4-5 V and has a width less than 1 usec.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there is no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
